

## SmarTraq™ Door Operator Upgrade Kit

### State-of-the-art, limitless “true” closed-loop technology for modernization and repair

MCE applies its expertise in non-proprietary controllers and closed-loop drives to the elevator door operator market with the introduction of the **SmarTraq Door Operator Upgrade Kit** — an innovative, limitless, closed-loop door operator kit ideal for modernization or repair of existing operators.

Door operation is the most visible aspect of elevator service and the source of the majority of service calls. The SmarTraq upgrade kit improves door performance, reliability, and maintainability.

#### Superior performance, reliability and maintainability

The SmarTraq upgrade kit includes a programmable inverter drive and a powerful AC brushless motor, providing the advantages of closed-loop, limitless operation while allowing you to retain the legacy chassis, header, track, hangers, and linkage already in place on the elevator cab. The SmarTraq inverter drive and motor replace obsolete mechanical circuits, cams, and resistors with digital controls for precise door operation and reliable performance.

“Limitless” technology means that limit signals, formerly generated by troublesome switches, are now digital values generated electronically by the drive unit. Limitless technology reduces the need to maintain and adjust mechanical switches and speeds installation and adjustment.

Using the same non-proprietary, closed-loop, drive control philosophy that distinguishes MCE controllers, the SmarTraq upgrade kit readily interfaces, mechanically and electrically, with most door operator installations. A powerful permanent magnet synchronous motor with built-in position encoder and velocity sensor is standard in all upgrade kits.

The SmarTraq inverter drive continuously determines the precise force necessary for optimum door operation, ensuring that the heaviest doors will open and close as efficiently and smoothly as the lightest. Easily-set parameters minimize the effect of external influences such as wind loading, temperature extremes, and track debris accumulation.

SmarTraq Otis 6970 Motor

SmarTraq Programmable Inverter Drive

#### Applications

- Modernization
- Repair

#### Benefits

- Superior reliability reduces downtime
- Easy adjustment — no special tools required
- Reduced installation time
- Less maintenance
- Available for most existing door operators
- Improved performance
- Adjusts for lobby door mass and wind loading

#### Features/options

- Permanent magnet, brushless AC motor
- Integrated encoder and motor speed sensors
- Inverter drive-based controller
- Built-in short circuit protection
- ASME A17.5, CSA-B44.1 compliant
- Bolt-for-bolt motor replacement
- Selectable input voltage (120, 208, 240 VAC 50/60Hz)

# SmarTraq™ Door Operator Upgrade Kit

## SmarTraq specifications

### Door operator drive technical data

**Input voltage** 120, 208, or 240 VAC, 50/60Hz, single phase

**Output voltage** 3-phase, 30 VAC, 9A (26A peak)

**Power requirement** 300 VA

**Controller type** Closed-loop, distance and velocity feedback, limitless

### Door motor technical data

**Type** Three-phase, AC brushless motor with polypole permanent magnet rotor and built-in digital encoder and motor speed sensors

**Motor** 0.564 HP, 3-phase AC, 8 pole, 30 volt, 9A (26A peak), 0-2000 RPM, 0-133Hz

**Encoder** 640 PPR (pulses per motor revolution)

### Elevator control interface data

**Input signal level** Isolated 28 VAC sourced from SmarTraq

**Output signals** Door close limit

Door open limit

Limit 1 (software adjustable from closed to 50% of door open position)

Limit 2 (software adjustable from open to closed door position)

**All output signals** N.O. / N.C. contact (10 Amp 125 VAC)

### Supported operators

#### Westinghouse

- A Series
- B Series
- BB2
- E Series
- EZ
- HY
- MG

#### Haughton

- T
- T1
- TH

#### Montgomery

- MAC Series

#### Dover

- DC Series
- HD Series

#### Otis

- 6970
- 7300
- 7782
- OVL (11.33:1)
- OVL (6.67:1)

#### GAL

- All models

#### Armor

- C4

#### Q & A

#### What is the difference between a SmarTraq Complete Door Operator and SmarTraq Upgrade Kit?

A SmarTraq Complete Door Operator package includes the SmarTraq motor, SmarTraq inverter drive and all necessary track, hanger and operator arm assemblies. SmarTraq Upgrade Kits include the SmarTraq motor and SmarTraq inverter drive to replace those in an existing installation.

#### How does closed-loop technology work?

When SmarTraq is calibrated, an ideal door movement profile is established. During operation, SmarTraq constantly monitors actual door position and compares it to the stored ideal. If the door lags, speed is increased. If the door moves ahead of the ideal, speed is decreased. The result is that the actual position is constantly matched to the stored ideal position — the loop between control and actual motion is closed.
